

Genetic Services for Families

The Department of Disabilities and Special Needs (DDSN) and the Greenwood Genetic Center work together to provide genetic services for individuals and families who are dealing with issues such as developmental delay, intellectual disability, autism, or birth defects. The purpose of a genetic evaluation is to find the cause of an individual's disability in order to provide appropriate guidance to all who participate in their care.

What is a genetic evaluation?

A genetic evaluation is a type of doctor visit. Appointments usually take an hour. We will talk about your child's/relative's birth, developmental, medical and family history. Prior to scheduling your appointment, a member of our staff will contact you to gather some of this information so that we are prepared for your visit. On the day of your visit, your child/relative will have a physical examination by a Greenwood Genetic Center provider.

We may want to do some testing to look for the cause of your child's/relative's disability. A blood, saliva, and/or urine sample might be taken at the appointment. If this testing shows the cause of your child's/relative's disability, the genetics team will contact you to explain this diagnosis.

If a diagnosis is made, regular genetic follow-up is needed in order to provide up-to-date information about the condition and health care guidelines.

Sometimes the reason for a person's disability cannot be identified during the first visit. It is helpful for these individuals and their families to follow-up with the genetics team because new tests often become available and new treatments are being developed for certain conditions. If a follow-up appointment is suggested, our genetics team will contact you when it is time to schedule that appointment.

Why is a genetic evaluation helpful?

Knowing the reason a person has a disability can be helpful for many reasons. Some disabilities can affect a person's health as well as their learning. A diagnosis may help doctors take better care of your child or relative. There may be certain treatments that may benefit your child or relative because of his/her diagnosis. Referrals can be made to doctors who specialize in particular problems related to the diagnosis.

A genetic evaluation can help families understand and deal with emotional issues related to the disability. It can also help the family to receive the support services they may need by connecting them with other families/groups dealing with similar issues.

A diagnosis may also be helpful to the rest of the family. Many times learning problems and disabilities can be passed from parent to child. A genetic evaluation may help to explain the chances for a certain disability to be passed on and what testing is available for other family members.

What is the cost of a genetic evaluation?

There is no direct charge to you for this evaluation. Private insurance, Medicaid, or Medicare will be billed, so please bring all insurance cards to your visit.

How do I schedule a genetic evaluation for my child/relative?

Any person who receives DDSN services can be seen for a genetic evaluation. These visits are usually held in one of the five Greenwood Genetic Center regional offices. In addition, clinics may be held periodically at certain county DDSN Boards throughout the state. Your Service Coordinator or Early Interventionist can help you set up an appointment.

GGC Offices
