

## TABULAE

The Greenwood Genetic Center announces publication of an English translation of Willem Vrolik's *Tabulae* (1849).

Each of the *Tabulae*'s 100 lithographic plates, scanned and enhanced to show their original quality and detail, is followed by translation of the descriptive narrative.

Translation of the text from Dutch and Latin to English was performed by Dr. Laurens de Rooij, Keeper of the Vrolik Collections, and edited by Dr. Roelof-Jan Oostra, Curator of Museum Vrolik, and Dr. Roger Stevenson, Director of the Greenwood Genetic Center.

The *Tabulae* measures 14¼ x 10½ inches and is beautifully bound with a raised spine and embossed lettering.

The *Tabulae* is available for immediate shipment and would make an important and valuable addition to your library's historical collection.

# Vrolik's TABULAE

The Dutch medical scientist, Willem Vrolik (1801-1863), was one of the pioneers in the field of teratology.

Vrolik's *Tabulae* includes 100 lithographic plates depicting the outlines of vertebrate embryology and a large selection of congenital anomalies in humans and other mammals.

The original Latin and Flemish texts have been translated into English and the text reflects the original as closely as possible, with the exception that obsolete medical terminology has been updated.

Also included in this special publication are three appendices which identify papers and essays by Vrolik, list the malformations, disruptions and deformations depicted in the *Tabulae*, and provide notes regarding specific plates or sections of the translation which may be of interest or assistance to the reader.

The purpose of this translation is to make this important work by Vrolik accessible to all scientists and students in the fields of dysmorphology and clinical genetics, pediatrics, teratology and medical history.
